EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Kaden on 10/17/2006.

2. The application has been amended as follows:

IN THE CLAIM:

Claim 13, line 15; "sais" has been changed to --said--.

3. The following is an examiner's statement of reasons for allowance: The present invention relates to the field of stereoscopic series of images. More specifically the invention relates to a process for producing stereoscopic series of images from a series of consecutive two-dimensional images of a scene, the images being acquired with a standard non-stabilized camera. The various cited related prior art of record fails to anticipate or render obviousness a method for converting monoscopic images to a sequence of stereoscopic images, comprising the steps:

a) processing the original sequence of monoscopic images of a scene by use of a device that is capable of reading the individual images, digitizing the images if necessary, and storing the images in a memory unit;

b) selecting from said sequence a subset of images of interest;

c) computing the collection of affine transformations between the adjacent images in the subset;

d) selecting one image of the sequence of the subset of images of a scene that will be one member of the first stereo pair of the sequence;

e) searching amongst the remaining images in said subset for a second image, which can be transformed into a suitable stereo partner for said selected image, by determining the cascaded affine transformation to each of the successive images starting with the neighboring image to said selected image and applying the parallax creation until said second image is found;

f) calculating a planar transformation by using said selected image, said second image, and the cascaded affine transformation between them;

g) applying said planar transformation to said second image;

h) storing said selected image and the transformed second image in the memory unit; and

i) repeating steps (c) through (h) for the next and each of the remaining images of said selected subset as specified in claim 1 (formerly claim 13).

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
